Illinois: Impact of “Tax Cuts and Jobs Act” on Latinos

In Illinois today, the Hispanic population numbers more than 2.1 million, more than one out of every six people in the state. The Nevada Hispanic community’s size, work ethic, and resilience have contributed to the national economic resurgence following the Great Recession. Nevertheless, a considerable portion of Latinos continue to lag behind, struggling to put food on their tables and a roof over their heads. In 2017, about 17% of Latinos in Illinois were living in poverty, compared to 12% of Illinoisans overall.

Instead of helping Illinoisans working hard and struggling to make ends meet, the “Tax Cuts and Jobs Act” would threaten to push them into or deeper into poverty, through increased taxes and decreased spending on crucial assistance programs. Under the bill:

- By 2027, one out of every two Latino households (more than one million) will see their taxes go up, by an average of $147 per year, due to expiration of increases to standard deduction and from using chained CPI to measure inflation.
  - More than 40% of the households facing a tax increase (470,000) have incomes of less than $50,000 per year.

- Almost 50,000 low-income households will receive zero benefit from the non-refundable expanded Child Tax Credit. When combined with the changes to health care, these households will incur a net loss from the “Tax Cuts and Jobs Act.”

- Four out of 10 Latino households (more than 830,000 households) will lose an average annual deduction of $12,900 from elimination of state and local tax deductions. Once increases to the standard deduction expire, these households will see a significant increase in their tax liability.
  - More than 120,000 low- to moderate-income Latino households will lose more than $6,000 in state and local tax deductions.
• By 2027, Latino households with incomes less than $75,000 (1.2 million households) will face an average higher annual tax burden of more than $8,100 (either through tax increases or reductions in benefits).\(^9\)
  o This burden is 75% higher for the lowest income Latino households (incomes less than $20,000).\(^10\)

The above figures do not include the effects of repealing the individual health care mandate, and therefore underestimate the adverse impact of the “Tax Cuts and Jobs Act” on Latino households. Further, the figures do not include the adverse impact that repeal of the state and local tax deductions will have on the public finances of state and local governments.\(^11\)
