

New York: Impact of “Tax Cuts and Jobs Act” on Latinos

In New York today, the Hispanic population numbers more than 3.5 million, nearly one out of every five people in the state.¹ The New York Hispanic community’s size, work ethic, and resilience have contributed to the national economic resurgence following the Great Recession. Nevertheless, a considerable portion of Latinos continue to lag behind, struggling to put food on their tables and a roof over their heads. In 2017, about 19% of Latinos in New York were living in poverty, compared to 12% of New Yorkers overall.²

Instead of helping New Yorkers working hard and struggling to make ends meet, the “Tax Cuts and Jobs Act” would threaten to push them into or deeper into poverty, through increased taxes and decreased spending on crucial assistance programs. Under the bill:

- By 2027, one out of every two Latino households (more than 1.7 million) will see their taxes go up, by an average of \$152 per year, due to expiration of increases to standard deduction and from using chained CPI to measure inflation.³
 - Forty percent of the households facing a tax increase (more than 700,000) have incomes of less than \$50,000 per year.⁴
- More than 90,000 low-income households will receive zero benefit from the non-refundable expanded Child Tax Credit.⁵ When combined with the changes to health care, these households will incur a net loss from the “Tax Cuts and Jobs Act.”⁶
- Four out of 10 Latino households (more than 1.3 million households) will lose an average annual deduction of \$8,300 from elimination of state and local tax deductions.⁷ Once increases to the standard deduction expire, these households will see a significant increase in their tax liability.
 - More than 180,000 low- to moderate-income Latino households will lose more than \$9,000 in state and local tax deductions.⁸

- By 2027, Latino households with incomes less than \$75,000 (2.2 million households) will face an average higher annual tax burden of more than \$9,100 (either through tax increases or reductions in benefits).⁹
 - This burden is 50% higher for the lowest income Latino households (incomes less than \$20,000).¹⁰

The above figures do not include the effects of repealing the individual health care mandate, and therefore underestimate the adverse impact of the “Tax Cuts and Jobs Act” on Latino households. Further, the figures do not include the adverse impact that repeal of the state and local tax deductions will have on the public finances of state and local governments.¹¹
