A Generation at Risk: The Threats to Illinois in the Current Immigration Landscape

In its 2019 report, Beyond the Border: Family Separation in the Trump Era, UnidosUS demonstrates how the current trajectory of the nation’s immigration policies is threatening the future of an entire generation of American children. Today, 80% of Latinos* are U.S. citizens1 and half of those remaining are legal permanent residents.2 While the portion of Hispanic adults who lack permanent legal immigration status is small, the impact of punitive immigration policies is felt by millions of families and has an outsized impact on American children. A growing body of research finds that indiscriminate immigration enforcement reaches well beyond immigrant families, affecting Americans of Hispanic descent and their communities3 by harming their physical and mental health,4 undermining their trust in government,5 and stoking fear for their families’ safety.6

This issue brief on Illinois is part of a series that builds on this analysis by exploring the stakes at the state level if the immigration policy status quo prevails. It compiles available population estimates to sketch a portrait of children in Illinois’s Latino immigrant families. For instance, while 97% of Latino children in Illinois are U.S. citizens, 55% of them have at least one immigrant parent. Furthermore, Illinois’s Latino children are 25% of the state’s youth and thus crucial to Illinois’s future success across various measures. Today, close to one in five workers in Illinois is Latino, as is one in eight of the state’s voters;7 thus, federal and state-level anti-immigrant policies that undermine the life outcomes of an entire generation of Illinois’s Latino children also depress a key engine of the state’s economic and political future. The implications of restrictionist immigration policies extend well beyond harming children and their families in Illinois: the long-term economic, social, and political health and vibrancy of the nation is at stake.

* The terms “Hispanic” and “Latino” are used interchangeably by the U.S. Census Bureau and throughout this document to refer to persons of Mexican, Puerto Rican, Cuban, Central and South American, Dominican, Spanish, and other Hispanic descent; they may be of any race. This document may also refer to this population as “Latinx” to represent the diversity of gender identities and expressions that are present in the community.
Hispanic Children in Illinois (Ages 0-17) and Their Families

One in four children in Illinois is Hispanic.\(^8\) Ninety-seven percent of Hispanic children in the state are U.S. citizens, as are most Hispanic adults.\(^9\) If we scratch the surface, an estimated 55% of Hispanic children in Illinois have at least one foreign-born parent.\(^10\) This points to a sizeable population of Hispanic parents in Illinois who were born outside of the United States and ultimately naturalized. It is thus concerning that a growing body of research shows that the children of Hispanic immigrants, including naturalized citizens, experience the complex harms of punitive immigration enforcement policies,\(^11\) such as fearing U.S. Immigration and Customs Enforcement (ICE), toxic stress and discrimination based on immigration status—even though nearly all Latino children in the state are U.S. citizens.\(^12\)

Based on the best available research,\(^1\) below are some characteristics of Illinois’s nonresident (non-green card holding) Hispanic and immigrant populations and their children:

- 97% of Hispanic children in Illinois (ages 0-17) are U.S. citizens.\(^13\)
- 55% of Hispanic children in Illinois (ages 0-17) have at least one foreign-born parent.\(^14\)
- 71% of Hispanic adults in Illinois are U.S. citizens;\(^15\) of those who are not, roughly 46% are legal permanent residents (green card holders).\(^16\)

- Approximately 339,000 Hispanic Illinoisans lack legal immigration status. They represent roughly 70% of Illinois’s undocumented population, but only 15% of the state’s Hispanic population.\(^17\)
- An estimated 289,000 U.S.-born children in Illinois live with at least one undocumented family member.\(^18\)
- A reported 34,330 Illinoisans have Deferred Action for Childhood Arrivals (DACA) status.\(^19\) Research suggests that 26% of DACA recipients have at least one U.S.-born child;\(^20\) estimates show as many as 15,200 U.S.-born children in Illinois may have a DACA recipient parent.\(^21\)
- As of 2017, an estimated 1,300 Hispanic Illinoisans had Temporary Protected Status (TPS).\(^6\) They have lived in the United States for an average of 21 years and have at least 1,000 U.S.-born children.\(^22\)
Health Outlooks for Illinois’s Hispanic Children

For more than a decade, significant progress has been made to reduce health coverage gaps for our nation’s children, including Latino children. Following the passage of the Affordable Care Act (ACA), the coverage disparity between Latino children and non-Hispanic White children shrank from 7 to 4% nationwide. However, in recent years, there have been indications that this progress has stalled or reversed in some cases. Illinois embraced ACA implementation and has been a leader in pursuing progressive policies to expand coverage to the remaining uninsured children. Illinois has taken the state option to cover lawful permanent resident children within the first five years of that status and is also one of only six states that has opted to provide coverage for all children, regardless of immigration status. Nevertheless, it is not immune to national factors that may be driving down health insurance enrollment. Since 2017, close to 75,000 children in Illinois have disenrolled from Medicaid and CHIP, the state’s low-income health programs. There is little evidence that a strong economy is causing dropping enrollments because the population of uninsured children who are eligible for Medicaid and CHIP is growing. Instead, child health experts believe that a variety of complex factors may be depressing enrollment, including the Trump administration’s restrictionist immigration policies. The impacts of these policies are called “chilling effects” because they create widespread fear that confuses and intimidates people from exercising their rights or accessing services for which they are legally eligible.

Even though 97% of Latino children in Illinois are U.S. citizens, more than half have at least one immigrant parent. Immigration policies are likely one factor in Latino coverage losses: the number of uninsured Latino children in Illinois grew 40% between 2016 and 2018. Today, Latino children in Illinois are 1.5 times more likely to be insured than their non-Latino peers. Overall, the environment is a challenging one for families whose children are eligible for some form of public health insurance, but who remain uninsured.

Economic Outlook for Illinois’s Hispanic Children

Hispanic children in Illinois are more than twice as likely to live in poverty (20%) than their non-Hispanic White peers (8.5%).

Even though Hispanic workers have a higher labor force participation rate than the U.S. average, they earn the lowest median wage of any ethnic group, regardless of immigration status. Consequently, Hispanic families are likely to experience financial shocks more acutely than their peers. During the Great Recession (2005–2009), Hispanic households lost 66% of their collective household wealth, compared to White non-Hispanic households’ 16% loss.

Immigration status compounds these disparities for families and the communities where they live, as observed during the foreclosure crisis of 2005–2012; Hispanic foreclosure rates in counties with higher shares of immigrant detentions and undocumented immigrant owner-occupied homes were significantly higher than in comparable counties in the same time period.

Moreover, the intergenerational transfer of wealth is an increasingly important factor in upward economic mobility, or the “American Dream.” Growing research shows that income inequality in the United States today is likely to play a larger role in future adult outcomes than talent and hard work. Not only are American children in immigrant families more likely to live in poverty, their parents’ ability to pass on future opportunities will be limited if they continue to be excluded from the economic advantages of naturalized citizenship, either by restrictive federal immigration policy, the high cost of naturalization in the United States, or both. The earning potential of at least 25% of Illinois’s future workers will certainly impact prosperity in immigrant communities and the broader economy alike.

Education Outlook for Illinois’s Hispanic Children

Despite educational gains in recent decades for many Latino students, there are still significant barriers to universal quality education in the United States, among them, the stress of an anti-immigrant climate. Three separate studies from the University of California, Los Angeles detail growth in behavioral and emotional problems in schools with large immigrant populations due to fears associated with immigration enforcement. Teachers from primarily White schools report increasingly hostile school environments for ethnic minority students at levels unprecedented in their careers. School is already a difficult developmental stage for all children; yet Hispanic children in the United States—in addition to experiencing common childhood anxieties—also fear family separation and share collective distress with their impacted classmates.

• 26% of K–12 students in Illinois are Hispanic.

• 33% of Hispanic K–12 students in Illinois are designated English learners (EL).

• 97% of Hispanic youth (ages 0-17) in Illinois are American citizens.

Immigration-related stress not only undermines Illinois’s students, it also poses a risk to the state’s teachers. In a 2018 Civil Rights Project at UCLA survey, 85% of 3,500 educators surveyed across the United States reported an “increase in anxiety and stress due to their students’ experiences with increased immigration enforcement” in the past year; many exhibited symptoms consistent with Secondary Traumatic Stress. High levels of stress and lack of institutional support are central drivers in the national teacher shortage crisis, especially in schools where students experience higher rates of poverty and inequality-related factors. Illinois has been facing critical teacher shortages in recent years; as of 2019, 85% of school districts in Illinois have teacher shortages. Illinois cannot afford to lose additional qualified educators due to immigration-related stressors. Everyone in Illinois loses when students are too stressed to focus, and educators are too stressed to teach.

Measuring Chilling Impacts in Illinois: The Public Charge Case Study

Direct harms produced by anti-immigrant policies are only half the story; their indirect, or chilling, impacts can be far-reaching. For example, following the Welfare Reform Act in 1996 (PRWORA), restrictions imposed on eligible immigrant access to social safety nets had negative spillover effects, such as increased disenrollment from assistance programs by eligible U.S. citizens. The opposite also appears to be true: states that maintained access to health and nutrition safety nets for eligible immigrants post-Welfare Reform saw an increase in high school graduation rates among Hispanic students, including a 10% point boost among students who would not have been subject to changes under PRWORA.

More than 20 years later, equivalents include policy changes such as the U.S. Department of Homeland Security (DHS) public charge regulation and its progeny. In many cases, the policy underpinnings for these rules expressly incorporate assumptions about their chilling impacts on eligible Americans in mixed-status families, running contrary to evidence which shows that child poverty causes negative life outcomes that can be mitigated by government antipoverty programs. Similar chilling effects can be observed following mass worksite raids and other immigration enforcement activities.

- Roughly 417,600 U.S. citizen children in Illinois live in immigrant families with at least one eligible family member who participates in a public support program. They are most at risk of chilling under policies like public charge.
- The ripple effects of the DHS public charge regulation are expected to cost the Illinois economy $359-797 million in lost GDP and 2,400 to 5,400 jobs.
- Roughly 19% of Latino households in Illinois accessed the Supplemental Nutrition Assistance Program (SNAP) at some point in 2017. That same year, SNAP helped lift nearly 500,000 Latino children out of poverty in the United States.
- Early local government data, notably out of New York City, confirm anecdotal reports of dramatic public charge-related chilling impacts on SNAP enrollment on citizen and noncitizen Latinos alike. Enrollment by eligible Hispanic citizens in New York City unexpectedly dropped 6.4 percentage points between January 2018 and January 2019. While state and federal government data are not yet available, it is possible that a similar phenomenon will be observed among the 97% of Hispanic children in Illinois who are U.S. citizens.

The DHS public charge regulation inspired other policy changes in its image, notably, the U.S. Department of Housing and Urban Development’s (HUD)* proposed rule targeting American children in mixed-status households.54

• Approximately 5,600 households that are eligible to receive rental supports in Illinois have at least one noncitizen family member.55

• Among those families who would lose their homes under the proposed HUD rule, 85% are Hispanic.56

• In 2017, 283,303 Hispanic children were lifted out of poverty in the United States by housing assistance.57

**Conclusion**

With a child population that’s 25% Latino, the influence and importance of Latinos to Illinois’s success will only continue to grow. Protecting and growing Illinois’s achievements will rely in part on investing in and protecting its homegrown Hispanic talent: today, Hispanic households in Illinois wield an average of $28,000 in spending power and make up one in eight of the state’s eligible voters.58 Illinois’s diversity is rich with potential for the state’s future, but the state must be careful to safeguard this wealth from anti-immigrant, anti-family policies. History shows that righting this ship is possible, but the stakes are also high if the status quo prevails. Our future as a nation hangs in the balance if we do not cultivate and promote the full health, abilities, and well-being of Illinois’s Latino children, the majority of whom live in American mixed-status families.

**About Us**

UnidosUS, previously known as NCLR (National Council of La Raza), is the nation’s largest Hispanic civil rights and advocacy organization. Through its unique combination of expert research, advocacy, programs, and an **Affiliate Network** of nearly 300 community-based organizations across the United States and Puerto Rico, UnidosUS simultaneously challenges the social, economic, and political barriers that affect Latinos at the national and local levels.

For more than 50 years, UnidosUS has united communities and different groups seeking common ground through collaboration, and that share a desire to make our country stronger. For more information on UnidosUS, visit [www.unidosus.org](http://www.unidosus.org) or follow us on [Facebook](https://www.facebook.com/unidosus), [Instagram](https://www.instagram.com/unidosus/), and [Twitter](https://twitter.com/unidosus).

---

* HUD’s proposed rule would change eligibility under Section 214 of the Housing and Community Development Act of 1980. According to the agency’s own analysis, the rule would force at least 55,000 eligible children to choose between eviction from their home and living with an ineligible parent or loved one.
